

SECURITY ROBOTICS

PROPERTY SURVEILLANCE
AUTONOMOUS PATROL

APPLICATIONS

PERSON RECOGNITION
Utilizing a combination of neural networks and advanced algorithms, security robots can learn how to recognize trespassers.

NOTIFY YOUR SECURITY
Automatically notify on-site guards and the main operator if any unusual activity is detected.

TWO WAY BROADCAST
Allow your operators to communicate through the robot. Deter trespassers or criminals with verbal warnings!

360° HD MONITORING
A powerful suite of HD cameras allow our security robots to monitor the surrounding environment and remain alert!

DAY/NIGHT PATROLS
Our camera systems can be equipped with infrared (IR) and nightvision, making night time patrols a breeze.

CREATE & EDIT PATROL ROUTES
Set regular patrol routes to follow. Add/Delete waypoints to your routes and set random routes to break routine!

IDENTIFY LICENSE & VEHICLES
Patrol for vehicles in unauthorized areas. Image recognition can allow for license identification and recording.

WEATHERPROOF DESIGN
Designed for heavy-duty use, these robots can handle outdoor patrols.

STRONG CONNECTIVITY
Power transmitters and receivers allow this robot to operate over a large range.
